Welcome to... Round Wood Local Wildlife Site... to Wycombe LAHE ENG ROAD Discover... Explore... Following the way-marked circular route will take approximately 30 minutes. Round Wood Sands Local Wildlife Site Industrial The central area is dominated by Ash trees that grew Estate may now only be up after the storm of 1990 blew down the mature Beech trees. The Beech weren't all lost and are now 10 acres, but it was once part of a much larger found primarily at the top of the slope on the network of woodland. Round Wood southern side of the site. This area of mature This has ensured that woodland is a good place to look for birds like Rec. Nuthatch, Treecreeper and Great Spotted Round Wood contains a great mix of species that Woodpecker. The west of the site is characterised probably wouldn't be by chalk grassland and scrub and is a great here if it had grown place to look for wildflowers and invertebrates. in isolation. 100m north you are here Round Wood to Lane End Key Mature woodland Steps Ash woodland Play Area Scrub Bench Chalk grassland Information Board Amenity grassland m m m Public footpath Circular Walk 10 acres:4.3 Ha ● ● ● ● Permissive paths

Look out for....

Great Spotted Woodpecker Dendrocopus major

Look up at the mature Beech and Oak trees that are found at the top of the site for this bird. Listen as it drums on the tree trunks, declaring its territory to all. The holes and deadwood to be

ound in the trees are also great places for them to hunt for their main food - insects and grubs.

This rather large and mean looking beetle is more common than you may think. The larves's favourite foods include rotting Beech, Ash and Apple making it a relatively common species amongst the deadwood left on site.

Look out for the adults in

St. George's Mushroom Calocybe gambosa

This edible mushroom gets its name from the time of year its can first be found (around the end of April). It is a particular lover of chalky soils and its found primarily within the woodland here. However, it can also be found in more open areas

Comma Polygonia c-album

This butterfly with distinctive jagged wings is generally seen flying between March and mid October. Look out for the adults anywhere on the site where there is warm sunshine and some nectar sources, particularly Thistles, Brambles, Ivy, Knapweeds and Frivet. The caterpillars feed on Stinging Nettles and Eim.

Round Wood is managed by WDC Woodland Service

with funding from the Forestry Commission's Woodland Improvement Grant to ensure it is protected and its biodiversity enhanced for the benefit of wildlife and the local community.
